

The Intelligent Choice...

...in Intelligent Terminals

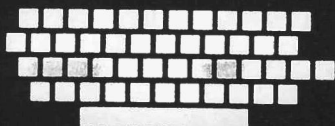

Conrac's Model 480/25 microprocessor-based CRT data terminal displays 2000 alphanumeric characters in a 25 line x 80 character format on a 12 inch (diagonal) screen. It can operate in a half duplex, full duplex or remote (stand alone) mode. Specific operation is under internal program control.

Designed around a type 6800 microprocessor, the 480/25 can change its character simply by changing resident software. This permits emulation of numerous system protocols such as TTY, Burroughs TD800 Series, and the Univac U100/U200.

Contact Conrac for the full story on the 480/25. Find out why we are *the* OEM supplier to industry.
